

A Guide to

CAB Aluminium Pavilion

In association with

THE FABRICATOR

Commercial Glazier and Glass Processor

Under the CAB umbrella

Justin Ratcliffe, CAB CEO, looks forward to a record breaking CAB Pavilion at the FIT Show which will highlight aluminium's growing presence in the domestic and home improvement sectors

The 15 member strong 500m² CAB Aluminium Pavilion in Hall 8 is testament to the exciting growth in the use of aluminium in the door, window and conservatory markets in housing. According to Robert Palmer, Palmer Market Research, "since 2008 aluminium has seen exponential growth of 37% in value terms" in this sector. This is impressive because it's been delivered while the market as a whole grew by just 2%. CAB's latest *State of the Market Survey* (Q1, 2017) highlighted, that despite the uncertainty that prevailed last year, there was still considerable confidence in the future with 86% net balance of respondents expecting sales to increase over the next 12 months.

Aluminium's ascendancy

The exhibition has really captured the imagination of the residential aluminium in building sector with Hall 8 dominated by the material and CAB, for its part, will be highlighting aluminium's potential for further significant growth in this sector. According to Palmer in his report on *The Window, Door and Conservatory Markets in Housing*

2016, 'aluminium as a material type and bi-fold doors remain in the ascendancy, building share in new markets'. Palmer predicts that there will be growth in the bi-fold door market alone of around 50% to 35,000 door sets by 2020 despite noting that 'some slowing in the housing market is likely'.

The 15 CAB members on the CAB Pavilion represent a wide cross section of the supply chain. There are a further 19 CAB members with their own stands throughout the FIT Show with all members being highlighted in the form of a 'CAB Trail'. A number of these exhibitors will be using the show as a launch pad for new aluminium products.

With its renowned technical expertise, the CAB technical team will be on hand in the CAB lounge area (CAB 01) to answer queries on relevant standards,

Supplement cover and page two images supplied courtesy of Reynaers Ltd

regulations and best practice issues. The lounge will be a draw for any fabricator/installer interested in adding aluminium to their existing range or wanting to know how they can take part in CAB's training provision for member companies.

CAB fabricator/installer training

We will be taking bookings for our fabricator/installer courses run in conjunction with Total Support Training which includes three relevant NVQ Units. The initial one day courses will cover:

- Health & Safety
- Handling materials
- Fabrication or installation of windows

The courses are scheduled to run in Sheffield, Birmingham and London and successful candidates will receive a GQA Skills Card. Fabricators undertaking more complex works may be interested to know how they can sign up for our series of leading contractual awareness courses organised by CAB and presented, throughout the UK, by Knowles.

Palmer predicts that there will be growth in the bi-fold door market of around 50% to 35,000 door sets by 2020

CAB is also interested in talking to fabricators and installers about the array of membership benefits available in 2017 and beyond.

Justin Ratcliffe

Join the professionals

Justin Furness, CAB technical director, looks at the technical membership benefits of being part of the essential trade body for aluminium in building

When I am asked what it is that we do at CAB, I reply that essentially we are here to promote and defend the use of aluminium in building in both commercial and residential applications on behalf of our members. For any non-members out there: who do you approach for technical information, advice and guidance?

Of course your suppliers will be able to help you with their perspective, but what if you would like an independent view? The continued growth in the use of aluminium in the construction sector is fantastic, and the growth of aluminium in the domestic market is striking. Perhaps as a fabricator or installer you are expanding into aluminium products, having started out in another material or market. If so:

- Do you need to know which British and European standards apply?
- How you should relate these standards to your aluminium products?
- Are you fully up to speed with all the regulations that you need to address?

Technical membership benefits

One of the advantages of being a member of CAB is priority access to our **technical helpline**. While we can't promise to be able to answer every question, we work on the principle that if we can't help, we aim to know someone who can. In addition, we have a wide range of user-friendly **Guidance Notes** available to members that cover many of the frequently asked questions, on topics ranging from part L to BIM. Our **Standards Watch** service will track all the British and European standards that are important to a member's business and alert you when any changes to these documents are in the pipeline,

helping you to stay one step ahead of the competition by demonstrating to customers that you have access to the latest standards information.

But this is only half of the story – this is how you can use CAB in reactive mode. CAB also works on behalf of its members in proactive mode. For example:

- Would you like to actually influence the standards and regulations that are under development before they impact on your business, or even possibly before they stop your business in its tracks?
- What policies and technologies will emerge in the future that you need to prepare for?

We sit on the critical **standards and industry committees** in the UK and Europe, where we can ensure that the interests of members are fully considered in forthcoming standards and regulations, and we look at how changes to these could even make your life easier.

To do this, we need to maintain an open, two-way dialogue with members, and this takes place primarily through our **Technical Committee**, on which each CAB member automatically has a seat. If you would prefer to have that dialogue with us on a one-to-one basis, we are always pleased to visit members' premises to discuss technical issues.

Join CAB to develop your technical capabilities

Additionally, we organise the annual **Aluminium in Building conference** and are expanding our range of **technical training** and **CPD**. We also maintain excellent links with our fellow associations in Europe, which helps us all improve as we promote and defend aluminium in building.

Justin Furness

One of the highlights of the CAB technical calendar is the annual Aluminium in Building conference

Aluminium Pavilion Exhibitors

As a dedicated sealant manufacturer, **Adshead Ratcliffe & Co Ltd** is able to supply products to the construction industry and meet virtually any requirements, its in-house research and development facilities at Belper are able to tailor make sealants for more specialized applications and for RAL colour matching to order.

Arbo Facade Solutions has developed its own EPDM Membrane System, which allows architects, contractors and installers to achieve excellent weather sealing results.

ArboMaster Warranty Scheme offers a 10 year guaranteed sealant application service through a network of approved applicators.

Alpro will be exhibiting once again this year at the FIT show on stand CAB 16, which forms part of the Council for Aluminium in

Building (CAB) pavilion. This is part of Alpro's long ranging strategy that aims to promote the company's product and services to the fabricator and installer community through every available means.

The **Alpro** product range comprises a variety of contemporary handle styles, which are both hard wearing and aesthetically pleasing, with bespoke designs available to your own specifications. The **Alpro** range also includes, both mechanical and electro mechanical products such as electric strikes and door locks. All of which have been designed for use in the commercial aluminium door industry.

Dales designs manufactures and supplies bespoke aluminium solar shading (brise soleil) systems that are tailored to suit individual projects either fixed to, or independent of, the curtain-walling systems. Elliptical shadex blades range in size from 100mm to 400mm and can be curved, as supplied on the prestigious Hyde Park underpass dual carriageway. **Dales** also designs and manufactures aluminium eaves cladding for large roof overhangs with elliptical and other bullnose features a speciality. Other aluminium products include aluminium rainscreen cladding, aluminium wall cappings and aluminium gutters and rainwater pipes.

AkzoNobel is the world's largest manufacturer of powder coatings for architectural applications, offering a range of standard and customised finishes meeting national and international standards.

Powder coating finishes are continually evolving and **AkzoNobel** is very much at the forefront of meeting design trends. So much so that it will also be showcasing an assortment of multi-component effects that resemble alternative materials including stone, concrete and anodising. These special effect finishes demonstrate variations in colour and patination and offer enhanced weathering resistance.

Come and see these finishes for yourself on the CAB Pavillion, we look forward to welcoming you.

Ultraline Systems combine minimal aluminium profiles with advanced engineering stability to achieve an enviable suite of sliding, folding, roof lights and windows.

Designed not only to achieve to optimum aesthetics and performance, each of the Ultraline Systems have been designed to have minimal or common parts, that are simple and easy to put together in order to benefit the fabricator. Once the product is made, design considerations have also been made to make it simple and easy to transport and fit in order to benefit the installer.

UK Based **Greenways Contemporary Ltd** owner of the Ultraline brand, offers excellent service and technical support on all its products.

West Yorkshire based **HW Architectural** has, for many years, operated as a pioneering force in the specialised world of aluminium glazing, facades and curtain walling.

In addition to its success in the commercial sector, it is now extending its reach into the domestic market as it introduces a trade-only bifold door offering. BiFold Choice will launch at the FIT Show with its proprietary, folding door system, designed to allow trade users to select from single to double, inline slide, folding sliding and lift & slide options. As well as unbeatable thermal performances, BiFold Choice offers an almost endless choice of colours and finishes, plus a stylish, robust range of furniture.

Howells is a family business of 50 years, based in the heart of the Black Country, specialising in manufacturing roof glazing systems. It is looking forward to showcasing its new and innovative trade range rooflight for its first appearance at the FIT Show this year.

This new thermally broken aluminium rooflight has undergone rigorous testing in preparation for this show. The range has a 'U' value of 1.0 w/m² and comes with several options such as choice of two colours in single or dual colour finish, triple glazing, self cleaning, solar controlled or Suncool 60/40 glass.

Howells is so excited to be appearing that it is offering every visitor to its stand the chance to win a trade rooflight.

VINCI Technology Centre UK Ltd operates Europe's largest façade testing laboratory. Based on a 5.5-hectare site with a 3,600m² indoor facility testing includes:

- Weathertightness
- Acoustic (airborne & flanking)
- Seismic
- Thermal

We also construct full scale building mock-ups and prototypes, and our materials laboratory performs a range of tests on construction materials. We are accredited to ISO/IEC 17025:2005 by the United Kingdom Accreditation Service. We carry out testing in accordance with European and international standards. Work can also be customised to suit client specific procedures.
